## PRODUCT DESCRIPTION:

TerraTrove Residue Complete is designed to aid in the breakdown of crop residue, improving planter performance and increasing nutrient availability to plants.

## MIXING AND APPLICATION:

### SOIL APPLIED ONLY

Tank mix TerraTrove Residue Complete according to the directions in the table below. Mix only enough for the immediate application. Do not mix product with bactericides or copper compounds.

Fill mix tank with half of required water volume and begin agitation. Add products in this order (mixing thoroughly after each addition): adjuvants, pesticides, then fertilizers. Fill tank with remainder of water and continue agitation until solution is completely mixed. Check chemical mixture compatibility using a jar test prior to application, especially for high phosphate and alkaline (pH > 7) solutions.

TerraTrove Residue Complete is a highly compatible tank mix partner with most herbicide and fertility programs. Optimum rate of application will vary depending on treatment interval, soil properties (such as pH, organic matter content, texture), weather conditions, time of year, plant species and its nutrient requirements. For best results, follow soil/tissue test recommendation.

CROP APPLICATION RECOMMENDATIONS	
Crop	Rate per application
All Crop Residues	12.8 fl. oz. into 10 gallons of water per acre
	Metric: 950 ml into 95L of water per hectare
